PROFESSIONAL SUMMARY

AWS-certified DevOps & Cloud Engineer with 3+ years of hands-on experience designing, automating, and operating secure, cost-optimized, cloud-native solutions across healthcare, SaaS, fintech, and enterprise platforms. Skilled across the full DevOps lifecycle: Infrastructure as Code (Terraform, AWS CDK), CI/CD pipelines (GitLab, GitHub Actions), containers (Docker, Kubernetes, Amazon EKS/ECS), and observability. Proven ability to translate business requirements into scalable AWS architectures, support pre-sales and solution design, and build AI/ML and generative AI workflows on Amazon Bedrock and SageMaker. Grounded in the AWS Well-Architected Framework and security and compliance standards (HIPAA, SOC 2).

TECHNICAL SKILLS

Cloud Platforms: AWS (primary), Azure Fundamentals; EC2, Lambda, S3, EFS, VPC, Route 53, CloudFront, ELB, Auto Scaling, RDS, DynamoDB, EKS, ECS, ECR, Elastic Beanstalk

DevOps & CI/CD: GitLab CI/CD, GitHub Actions, Git, SVN, Jenkins concepts, build/test/deploy automation, release management, branching strategies

Infrastructure as Code: Terraform, AWS CDK (TypeScript & Go), AWS CloudFormation, Ansible, AWS Systems Manager

Containers & Orchestration: Docker, Kubernetes, Amazon EKS, Amazon ECS (Fargate), ECR, CDK8s, Helm concepts

Monitoring & Observability: Amazon CloudWatch, CloudTrail, Prometheus, Grafana, ELK Stack

Security & Compliance: IAM, AWS WAF, GuardDuty, Security Hub, AWS Config, Inspector, Detective, KMS, Secrets Manager, Cognito, HIPAA, SOC 2

AI / ML & Generative AI: Amazon Bedrock, Amazon SageMaker, Amazon Q, Textract, Transcribe, Rekognition, Polly

Databases: Amazon RDS, DynamoDB, MySQL, MariaDB, PostgreSQL, Redis

Scripting & Languages: Python, Bash / Shell scripting, TypeScript

Migration & DR: AWS MGN, AWS DRS, DataSync, AWS Backup, on-premises to cloud migration

Web & Networking: Nginx, Apache, DNS, Load Balancers, TCP/IP, HTTP/HTTPS, SSH, API Gateway

Operating Systems: Linux (Ubuntu, RedHat, Debian, Amazon Linux), Windows

PROFESSIONAL EXPERIENCE

Onedata Software Solutions | AWS Advanced Tier Services Partner

DevOps Engineer

2023 - Present | Chennai, India

- Designed and delivered scalable, cost-optimized AWS architectures from client requirements, producing solution proposals, architecture diagrams, and cost estimates across multiple customer environments to support pre-sales and technical solution presentations.
- Led on-premises to AWS cloud migration and modernization initiatives using AWS MGN and Infrastructure as Code, achieving high availability with minimal downtime.
- Built and maintained CI/CD pipelines on GitLab and GitHub Actions, automating build, test, and deployment workflows for microservices and REST APIs, reducing manual release effort and deployment errors.
- Authored reusable Terraform modules and AWS CDK (TypeScript) stacks and published a module to the Terraform Registry, enabling enterprise customers to deploy the product within their own AWS accounts.
- Refactored monolithic applications into microservices on Amazon ECS Fargate, provisioning task definitions and services via CloudFormation and invoking containers from AWS Lambda.
- Designed secure, compliant architectures using IAM, WAF, GuardDuty, Security Hub, AWS Config, and Secrets Manager; implemented HIPAA and SOC 2 controls for healthcare workloads.
- Implemented centralized logging, monitoring, and alerting with CloudWatch, CloudTrail, Prometheus, Grafana, and the ELK Stack, improving system availability and operational visibility.
- Designed and integrated AI/ML and generative AI workflows on Amazon Bedrock and SageMaker to enable intelligent automation and candidate-evaluation use cases.

- Optimized performance for high-traffic applications by tuning Nginx, Redis caching, and database queries, reducing response times by approximately 30%.
- Coordinated release planning with Project, Development, and QA leads and managed SCM branching strategies (Git, SVN), resolving merge conflicts across development teams.

KEY PROJECTS

- **HireOne - AI-Based Hiring Platform:** Built an AI candidate-evaluation solution on Amazon SageMaker and Bedrock with custom ML models and Jupyter-based training/validation workflows, enabling AI-driven hiring automation.
- **OneCare - Hybrid Cloud (Healthcare):** Architected a hybrid on-premises + AWS environment using AWS CDK (TypeScript & Go) with secure connectivity and a scalable, enterprise-grade, HIPAA-aligned deployment model.
- **Kafupi - Social Platform on Kubernetes:** Deployed a React / NestJS application via CDK8s on Kubernetes with Percona MongoDB; configured Nginx ingress for load balancing and backend validation.
- **Calspas - On-Premises to AWS Migration:** Migrated legacy workloads to a highly available AWS environment using Terraform, ensuring a seamless cutover with minimal downtime.
- **SurgeTech - Greenfield LMS Platform:** Designed end-to-end AWS infrastructure from scratch, automated with GitHub Actions, and delivered a Well-Architected assessment and security review.
- **CASHDirek - Well-Architected Review:** Conducted a 6-pillar AWS Well-Architected Framework review, identified security, reliability, and cost risks, and delivered a remediation plan with monitoring and alerting.
- **Royal Medical Center - Security Transformation:** Analyzed a reported breach, designed an AWS-native security and remediation architecture, and deployed endpoint security and real-time monitoring aligned to healthcare compliance.
- **Additional Deployments:** ERPNext/Frappe (MariaDB, ALB autoscaling), Open edX on EKS (Bottlerocket), WordPress and React/Next.js/NestJS apps on EC2 with Terraform & CDK, and Cognito/API Gateway/Lambda stacks across TradeInfoPower, GOIRISH, Aria Network, Darkhorse-win, and Mymedvita.

CERTIFICATIONS

- AWS Certified Solutions Architect - Associate
- AWS Certified Security - Specialty
- AWS Certified Cloud Practitioner - Foundational

AWS PROGRAMS & ACHIEVEMENTS

- AWS Foundational Technical Review (FTR) - Qualified Software.
- AWS Service Delivery Programs: Lambda, CloudFront, RDS, Systems Manager, WAF, Control Tower.
- AWS Service Ready: CloudFront, Cognito, AWS Graviton, Amazon Linux, RDS.
- AWS Well-Architected Labs completed across all 5 pillars: Cost, Security, Reliability, Performance, Operational Excellence.

EDUCATION

B.E. - Computer Science & Engineering

2019 - 2023

J.K.K. Nattraja College of Engineering & Technology, Namakkal, Tamil Nadu | CGPA: 8.34 / 10
